

Curved Panel Glide System Silent Gliss 2730 Flex

Silent Gliss Panel Glide Systems

A Unique Dimension in Window Treatment

Silent Gliss offer the most sophisticated panel glide range. We have innovative systems for every need – choose between flat and folding panels, straight or curved tracks. Panel glide systems are perfect for today's extensive glazed areas.

Quality and warranty

All the material used for our panel glides are rust free and UV resistant for perfect functionality and appearance over time. Extensive testing of our high quality products allows us the confidence to offer a 5 year warranty.

Precision

Our experienced specialists assemble every system manually to guarantee a precise and smooth operation – day after day!

Ease of operation

Our systems offer a virtually silent gliding of the panels and perfect operation for every need – from hand, cord to electrically operated – everything is possible.

Made-to-measure

Panels are made-to-measure in relation to proportional aesthetics, window dimensions and individual taste.

Function and Design

The concept of sliding panels originated in Japanese cultural traditions. In the 1970's Silent Gliss was the first company to successfully adapt this idea for a new, high-quality window treatment solution. Still today, with the latest generation, Silent Gliss continue to offer a unique range of panel glide systems, providing a truly remarkable and creative opportunity for interiors.

Straight or curved

Our systems are either straight or curved, offering the perfect solution in every situation.

Smooth and silent

Sophisticated in design, the rollers and tracks allow a smooth and virtually silent gliding of the panels.

Operation Possibilities

Our panel glide systems offer various operation possibilities.

Unconnected panels

Panels move freely and individually offering endless ways to adjust the light and design the look of your room.

Connected panels

Connected panels are easily operated by an optional stylish draw rod.

Cord operated

A single cord operates the panels, and various stacking possibilities allow you to individualise your panel system.

Motorised

The straight system Silent Gliss 2700 and 2650 Panel Fold can be operated electrically by fixed wall switch or from the comfort of your chair with our remote control system.

Attention to Detail

Our carriers for system 2700 are top quality. The aluminium carrier is durable and highly functional travelling smoothly and quietly along the track. Alternatively, a unique transparent carrier is perfect for applications where very delicate and fine fabrics are used.

The click-in option for Silent Gliss 2700 allows even greater flexibility. The carrier can simply be clicked in after the profile is mounted to the ceiling.

Recess your system

For the perfect installation – recess profiles allow the system Silent Gliss 2700 to be mounted close to the ceiling.

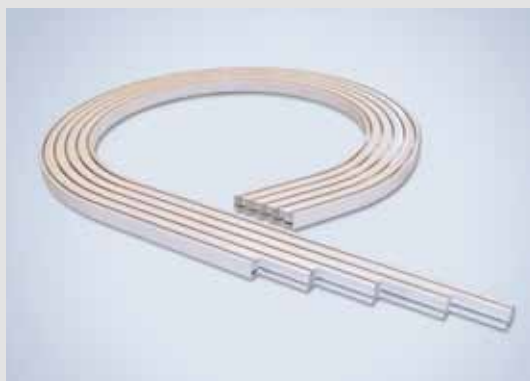

A Curved Sensation

Our bendable panel glide system Silent Gliss 2730 Flex adjusts to every possible room layout. It can be used as a design element or room divider due to its adjustable tracks and panels – every room is individual.

A unique flexible carrier allows the smooth and silent gliding of panels effortlessly around corners with narrow angles without stretching the fabrics.

Around the corner

System Silent Gliss 2730 Flex allows panels to be stacked “around the corner”. Due to an innovative and ingenious track system, the profiles can be bent down to a narrow 15cm radius which allows the system to be used in rooms with 90 degree angles. Stacking the panels to the side offers undisturbed views.

An Innovation in Room Dividing

The system Silent Gliss 2760 enables the installation of panels in hospitals and in rooms with uneven ceilings. It also offers endless ways to separate, decorate and design your room!

The system is suspended with sturdy hangers allowing air circulation throughout the room. The hangers give stability, are easily installed and can be adjusted to the desired length.

Design Your System

All our panel glide systems become true eye-catchers and offer an elegant and timeless look when combined with our new fascia and draw rod design elements.

A high quality, bendable design fascia offers the perfect finish and effectively hides the internal workings of the panel glide system.

The new stylish draw rod enables the system to be operated with ease. A slight pull is enough to make the panels glide almost silently and the aluminium tube guarantees high stability.

For corded systems optional design cord weights are available in chrome, anthracite or white.

Folding Panel Systems – Discover Unique Elegance

The Folding Panel product range is a revolutionary window treatment solution from Silent Gliss. It's a highly innovative way to dress a window and define the look of a room.

Create natural elegance through the cool sophistication of sheer fabrics or sumptuous luxury with bright colour combinations.

Silent Gliss invite you to enter the inspiring world of Panel Fold, be creative and discover the opportunities of these unparalleled products.

The systems can either be operated by a single chain, crank, electric by switch or from the comfort of your chair with our remote control system.

One window treatment – countless different looks

Spring sunshine – make the most of it! The folding panels stack back into a small area to expose maximum window.

Stylish yet unobtrusive – the clean lines of the completely folded panel give a pared down elegance and allow a remarkable view outside.

Folding Panel at its best – refined sophistication for a room. The softer folds create stunning spatial effects.

When closed, for maximum privacy, the panels retain a unique shadow fold, adding a 3-dimensional shape and depth to the window treatment.

Total Control

Silent Gliss radio control systems allow remote operation without the need of complex wiring.

Operation possibilities

- Variety of hand held and wall switches
- Single or multiple channel solutions
- Daylight controlled operation with light sensors
- Timer function
- Remote control by SMS
- Home automation connectivity
- Smart phones and tablets (eg. iPhone and iPad) connectivity

Remote controls Silent Gliss 9940

Remote controls Silent Gliss 0450

Our Customer Services team will be on hand from the start to offer expert advice on the most appropriate systems, control combinations and wiring for your project.

The Fabrics

When combined with fabrics from our exclusive collections, our systems offer the perfect interaction between functionality and design.

Our thoroughly tested fabric range consists of more than 40 fabrics in 500 variations, providing wonderful textures and colours, together with exciting patterns. For a completely individual look we also offer digital printing, laser cut-outs and embroidery work.

Panels can be easily removed for washing due to their Velcro fastening (Silent Gliss 2700 and Folding Panel Systems) or can be slid into the flexible carrier using a profile which is sewn onto the fabric (Silent Gliss 2730 and 2760). The profile can then be washed together with the fabric.
